

Period: _____ Version #: _____

	Description of Mistake:	
Problem #	The descriptions of the mistakes MUST be math specific. You cannot write, "I added wrong, I guessed, I did the math wrong etc." If you did guess or left a problem blank, you need to explain how to solve the problem correctly (in its entirety) for the description.	Resolve the problem showing ALL steps:
Example: 8	I did not find the x-intercept. I should have done a similar process of finding the y-intercept, which would just be doing $4x - 6(0) = 14$ to find x-int. The x-int. is supposed to be $\frac{7}{2}$.	$4x - 6(0) = 14$ $4x = 0 + 14$ $\frac{4x}{4} = \frac{14}{4}$ $x = 3\frac{1}{2} \rightarrow \frac{7}{2}$ <div style="border: 1px solid black; padding: 2px; display: inline-block;">x-int: $\frac{7}{2}$</div>
